

# Homework 3

Name: Nishit Umesh Parekh

## **POINTS TO BE NOTED:**

- 1) Do not use “Run All Cells”. This causes only the last plot to be interactive. Instead, run each cell one-by-one.  
If problem persists, use the interaction for one plot, and only then run the cells below them.
- 2) Sometimes, plots can get stuck in a place. To make them interactive again, just change a viewing parameter for that plot; it should reset and display the correct data again.
